

Network Control Centers (NCC)

Proficiency Code: B

Network management functions are consistently in a state of change and right sizing. The *Network Control Centers (NCC)* typically aligns under the base communications squadron and currently provides Tier 3 (local level) on-site technical capability to implement physical network changes, modifications, and restoration of faulty network transmission equipment and circuits when tasked. As these functions centralize in the Integrated Network Operations and Support Centers (I-NOSCs), the role of NCCs will diminish and human resources will be re-sized to perform limited touch maintenance only.
