

Theater Deployable Communications (TDC)

Proficiency Code: A

TDC consists of state-of-the art ground-to-ground communications infrastructure designed to exchange secure and non-secure voice, data, and video communications by way of line of sight (LOS), satellite, or hard wired resources. TDC's role is to support the efficient transfer of command and control, intelligence, logistics, and administrative data between fixed sites and deployed locations, multiple functional areas at each deployed location, and/or continental United States (CONUS) gateway locations and deployed locations. TDC is comprised of highly transportable commercial-off-the-shelf (COTS) communications equipment, housed in hardened transit cases, and is fully scalable to meet new Air Force mission requirements. Unit Type Code (UTC) design incorporates the Air Force Expeditionary Task Force (AETF) force module concept and mixing and matching these easily transportable modules can support any size deployment.
