

Checklists, Standard Operating Procedures (SOP), and Tactics Techniques and Procedures (TTP)

Proficiency Code: A

The Air Force acquires much of its cyberspace equipment through commercial means. Commercial Off The Shelf (COTS) systems lend considerable relief to the need for specialized, military-only systems and allow for a commonly understood, maintainable, and defendable domain through all federal and non-federal sectors. Since most of the equipment already comes with maintenance and training manuals, to convert them to Air Force maintenance manuals or Technical Orders (TOs) would be too time intensive and costly. Instead, we have created checklists, Standard Operating Procedures (SOPs), and Tactics Techniques and Procedures (TTPs) based on COTS manuals to capture military-unique processes and procedures used to maintain our equipment.
